"Discovering Exoplanets"

Saturday 6pm May 5, 2018

Holiday Inn Ballroom - Clinton, NJ

Please join us for dinner to hear a fascinating presentation on how planets around other stars are discovered. Dr. Joshua Pepper - Lehigh University, will explain the latest techniques used by space-craft and ground based telescopes.

Hosted by the New Jersey Astronomical Association - the largest amateur astronomy organization in New Jersey and the only public observatory in Hunterdon County.

Dr. Joshua Pepper

- Reception cocktail hour / Meet and Greet
- Astronomical displays from the NJAA observatory
- Deep Sky Image display from our Imaging & Research Groups

- Welcome and short talk about NJAA and our Mission
 - Future building expansion plans
 - Full course plated dinner with dessert
- Feature Presentation by Dr. Joshua Pepper

NJAA is located in Voorhees State Park (High Bridge). Our mission is to educate the public on astronomy and provide opportunities to view the skies through our various telescopes including our 26" telescope - the largest public telescope in New Jersey!

See: www.njaa.org.

Please help us to continue our Mission by attending this event!
